Presentation Title: Multiple Datasource Challenges in Course and Teaching Evaluations: University of Auckland's Experience in Using Data Sync Tool

Presenters: Lizzie Li, University of Auckland

Description: How to locate and link data from multiple sources has become one of the common challenges for many tertiary institutions in administering course and teaching evaluations. The University of Auckland was confronted with the same challenge, when course and teaching evaluations were moved to the centralized online system on eXplorance's Blue platform. We used Data Sync Tool (DST), Blue's companion application, as the technical solution for streamlining data flow from the various data sources and systems to the cloud-hosted instance in a timely manner. The presentation discusses the approach taken to improve data quality from the multiple data sources for reliable course and teaching evaluations, utilizing DST to perform automated data syncing and administer course and teaching evaluations institution-wide.
